RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 90 pages. Original publisher: Washington, D. C. : National Telecommunications and Information Administration, 2010 OCLC Number: (OCoLC)671751259 Subject: Radio -- Interference. Excerpt: . . . EXECUTIVE SUMMARY This report describes the results of radiated emission measurements on a radio-service denial device (called a jammer). The manufacturer temporarily provided the device to the National Telecommunications and Information Administration (NTIA) Institute for Telecommunication Sciences (ITS) Boulder laboratory for the purpose of such measurements. The device is designed to jam communication services in the 869-894 MHz (cellular) and 1930-1990 MHz (PCS) radio bands. Please note that the device does not carry any Federal Communications Commission (FCC) certification and its design and parts are idiosyncratic to the manufacturer. NTIA performed the measurements mostly via radiated emissions in a National Institute of Standards and Technology (NIST) radio-anechoic chamber. NTIA measured the devices emissions in both the frequency and time domains. NTIA performed spectrum measurements from 100 MHz to 6 GHz. This allowed the devices emissions to be measured up to the sixth harmonic of its lower-band (cellular band...

Reviews

It in one of the best ebook. Yes, it is actually engage in, still an interesting and amazing literature. Its been developed in an exceedingly straightforward way in fact it is just following i finished reading through this book by which basically modified me, alter the way i really believe.

-- **Mr. Maynard Kessler PhD**

This ebook could be well worth a study, and superior to other. It really is basic but unexpected situations inside the 50 % of your ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Prof. Buford Ziemann**
